The Select DAC
The world's most revealing Digital to Analog Converter.

- Flagship model
- Starting MSRP 84,500 USD
- 8X Hybrid DAC modules
- 2096 discrete LED display
- Isolated power supply design
- Billet CNC aluminum chassis
- 10 Year limited warranty

- Future proof modular design
- Femto 77 clock
- Network Renderer
- Native Quadrate DSD
- MQA support
- Custom finishes
- Crafted in California, USA

The Select Powerbases
The importance of a clean power supply can’t be underestimated. A reimagined design paired with the DAC reduces the noise floor even further. We’ve equipped it with a single supply for the digital side of the DAC, along with an isolated supply for the analog side, yielding an unprecedented level of performance. With the available mono powerbase upgrades, we provide increased isolation and electrical performance for both the digital and the analog supplies. The increased space guarantees an exponentially lower noise power supply design.

A Modular Future
We offer an wide selection of input and output modules to tailor your DAC to your every need. Each module is easy to swap, encouraging versatility and simplicity. Our design architecture allows us to develop new inputs that anticipate the demand of the ever-changing digital realm, ensuring that your experience remains dynamic and unforgettable.

The last preamp you will ever need
With the high-output power provided by the Hybrid DAC modules, the need for preamplification is eliminated. The signal is attenuated with new technology that provides a constant low impedance output without any active circuitry (no transistors, buffers or op-amps). This allows the Select DAC’s remarkable audio quality to be truly independent of volume setting. It’s a remarkable feat of electrical design that sets a new benchmark in the industry.

Femtosecond Clocks
The Select DAC uses MSBs’ femtosecond clock technology, giving you the option to upgrade to achieve the lowest jitter in the industry using aerospace grade parts and technology. With the Femto 77 as standard, the Femto 33 is available for upgrade in the Select DAC.
